

## Toothed belt axes EGC-HD-TB, with heavy-duty guide

**FESTO**

## Selection aid

### Overview of toothed belt and spindle axes

#### Toothed belt axes

- Speeds of up to 10 m/s
- Acceleration of up to 50 m/s<sup>2</sup>
- Repetition accuracy of up to ±0.08 mm
- Strokes of up to 8500 mm (longer strokes on request)
- Flexible motor mountings

#### Spindle axes

- Speeds of up to 2 m/s
- Acceleration of up to 20 m/s<sup>2</sup>
- Repetition accuracy of up to ±0.003 mm
- Strokes of up to 3000 mm

#### Coordinate system

#### Toothed belt axes

## Key features

### At a glance

- New heavy-duty design for:
  - Maximum loads and torques
  - High feed forces and speeds
  - Long service life
- Precision DUO guide rail with high load capacity
- Ideal as a basic axis for linear gantries and cantilever axes
- Space-saving position sensing with proximity switch in the profile slot is possible
- Toothed belt material can be selected from:
  - Chloroprene rubber for long service life
  - Coated PU with steel reinforcement cords for long service life and resistance to certain cooling to certain cooling lubricants
- Wide range of options for mounting on drives
- In addition to the technical data, the toothed belt axis impresses with its excellent price/performance ratio

### Flexible motor mounting

The motor position can be freely selected on 4 sides and can be changed at any time.

### Flat unit with rigid, closed profile

EGC-HD-125

EGC-HD-160

EGC-HD-220

### Characteristic values of the axes

The specifications shown in the table are maximum values.

The precise values for each of the variants can be found in the relevant data sheet in the catalogue.

Design	Size	Working stroke [mm]	Speed [m/s]	Repetition accuracy [mm]	Feed force [N]	Guide characteristics				
						Forces and torques

## Key features

### Slide variants

Standard slide

Standard slide, protected

With additional slide

### Guide options

→ Page 19

With central lubrication

- The lubrication adapters enable the guide to be permanently lubricated using semi or fully automatic relubrication devices
- The adapters are suitable for oils and greases
- All lubrication connections must be connected

### Displacement encoder

→ Page 12

The position of the slide can be sensed directly when using the incremental displacement encoder. This means that all elasticities of the drivetrain can be detected and corrected by the motor controller.

### Complete system comprising toothed belt axis, motor, motor controller and motor mounting kit

Peripherals overview

## Peripherals overview

Variants and accessories			
	Type/order code	Description	→ Page/Internet
[1]	Toothed belt axis EGC-HD-TB	Electric drive	10
[2]	Emergency buffer with retaining bracket A	For avoiding damage at the end stop in the event of a malfunction	35
[3]	Shock absorber with retaining bracket C	For avoiding damage at the end stop in the event of a malfunction	35
[4]	Centring pin/sleeve ZBS, ZBH	<ul style="list-style-type: none"> <li>For centring loads and attachments on the slide</li> <li>Included in the scope of delivery: <ul style="list-style-type: none"> <li>For size 125: 2x ZBS-5, 2x ZBH-9</li> <li>For size 160, 220: 2x ZBH-9</li> </ul> </li> </ul>	35
[5]	Switch lug X, Z, O, P, W, R	For sensing the slide position	33
[6]	Sensor bracket O, P, W, R	Adapter for mounting the inductive proximity switches (round design) on the axis	34
[7]	Proximity switch, M8 O, P, W, R	<ul style="list-style-type: none"> <li>Inductive proximity switch, round design</li> <li>The order code O, P, W, R includes 1 switch lug and max. 2 sensor brackets in the scope of delivery</li> </ul>	37
[8]	Axial kit EAMM	For axial motor mounting (comprising: coupling, coupling housing and motor flange)	28
[9]	Motor EMME, EMMS	Motors specially matched to the axis, with gear unit, with or without brake	28
[10]	Slot cover B, S	<ul style="list-style-type: none"> <li>For protection against contamination</li> </ul>	35
[11]	Proximity switch, T-slot X, Z	<ul style="list-style-type: none"> <li>Inductive proximity switch, for T-slot</li> <li>The order code X, Z includes 1 switch lug in the scope of delivery</li> </ul>	36
[12]	Connecting cable V	For proximity switch (order code W and R)	37
[13]	Clip CL	For mounting the proximity switch cable in the slot	35
[14]	Slot nut Y	For mounting attachments	35
[15]	Adapter kit DHAM	For mounting the support profile on the axis	36
[16]	Support profile HMIA	For mounting and guiding an energy chain	36
[17]	Profile mounting M	For mounting the axis on the profile	31
[18]	Adjusting kit EADC-E16	For mounting the axis on a vertical surface. Once mounted, the axis can be aligned horizontally	32

Type						
Resolution	[μm]	2.5		10		
Max. travel speed with displacement encoder	[m/s]	4		4		
Encoder signal		5 V TTL; A/A, B/B; reference signal (N/N) cyclically every 5 mm (zero pulse)				
Signal output		Line driver, alternating, resistant to sustained short circuit				
Electrical connection		8-pin plug, round design, M12				
Cable length	[mm]	160				
Operating and environmental conditions – Displacement encoder system						
Ambient temperature	[°C]	-10 ... +70				
Degree of protection		IP64				
CE marking (see declaration of conformity)		To EU EMC Directive <sup>1)</sup>				

- 1) For information about the area of use, see the EC declaration of conformity at: [www.festo.com/sp](http://www.festo.com/sp) → Certificates.  
If the devices are subject to usage restrictions in residential, commercial or light-industrial environments, further measures for the reduction of the emitted interference may be necessary.

## Application information

- The displacement encoder contains paint-wetting impairment substances.
- The toothed belt axis with displacement encoder is not designed for the following application examples:

- Magnetic field

- Welding application

## Data sheet

### Characteristic load values

The indicated forces and torques refer to the slide surface. The point of application of force is the point where the centre of the guide and the longitudinal centre of the slide intersect.

These values must not be exceeded during dynamic operation. Special attention must be paid to the deceleration phase.

#### Max. permissible forces and torques for a service life of 5000 km

Size		125	160	220
$F_{y_{max}}$	[N]	3650	5600	13000
$F_{z_{max}}$	[N]	3650	5600	13000
$M_{x_{max}}$	[Nm]	140	300	900
$M_{y_{max}}$	[Nm]	275	500	1450
$M_{z_{max}}$	[Nm]	275	500	1450

#### Note

For a guide system to have a service life of 5000 km, the load comparison factor must have a value of  $f_v \leq 1$ , based on the maximum permissible forces and torques for a service life of 5000 km.

If the axis is subjected to two or more of the indicated forces and torques simultaneously, the following equation must be satisfied in addition to the indicated maximum loads:

Calculating the load comparison factor:

$$f_v = \frac{|F_{y1}|}{F_{y2}} + \frac{|F_{z1}|}{F_{z2}} + \frac{|M_{x1}|}{M_{x2}} + \frac{|M_{y1}|}{M_{y2}} + \frac{|M_{z1}|}{M_{z2}} \leq 1$$

$F_1/M_1$  = dynamic value

$F_2/M_2$  = maximum value

## Data sheet

### Calculating the service life

The service life of the guide depends on the load. To be able to make a statement as to the service life of the guide, the graph below plots the load comparison factor  $f_v$  against the service life.

These values are only theoretical. You must consult your local Festo contact for a load comparison factor  $f_v$  greater than 1.5.

#### Load comparison factor $f_v$ as a function of service life

Example:

A user wants to move an X kg load. Using the formula (→ page 13) gives a value of 1.5 for the load comparison factor  $f_v$ . According to the graph, the guide would have a service life of approx. 1500 km. Reducing the acceleration reduces the  $M_z$  and  $M_y$  values. A load comparison factor  $f_v$  of 1 now gives a service life of 5000 km.

#### Note

Engineering software  
Electric Motion Sizing  
[www.festo.com/x/electric-motion-sizing](http://www.festo.com/x/electric-motion-sizing)

The engineering software can be used to calculate the guide workload for a service life of 5000 km.

$f_v > 1.5$  are only theoretical comparison values for the recirculating ball bearing guide.

### Comparison of the characteristic load values for 5000 km with dynamic forces and torques of recirculating ball bearing guides

The characteristic load values of bearing guides are standardised to ISO and JIS using dynamic and static forces and torques. These forces and torques are based on an expected service life of the guide system of 100 km to ISO or 50 km to JIS. As the characteristic load values are dependent on the service life, the maximum permissible forces and torques for a 5000 km service life cannot be compared with the dynamic forces and torques of bearing guides to ISO/JIS.

To make it easier to compare the guide capacity of linear axes EGC with bearing guides, the table below lists the theoretically permissible forces and torques for a calculated service life of 100 km. This corresponds to the dynamic forces and torques to ISO.

These 100 km values have been calculated mathematically and are only to be used for comparing with dynamic forces and torques to ISO. The drives must not be loaded with these characteristic values as this could damage the axes.

#### Max. permissible forces and torques for a theoretical service life of 100 km (from a guide perspective only)

Size		125	160	220

Stroke reserve

Stroke length

Stroke reserve

The selected stroke corresponds in principle to the required working stroke. The variants GK do not have a long-term lubrication unit on the guide. These variants therefore have an additional safety distance between the drive cover and slide that is not designated as part of the working stroke.

It is possible to define a safety distance (similar to that for GK) between the drive cover and slide for the variants GP using the "stroke reserve" characteristic in the modular product system. With the variants GK, the stroke reserve and safety distance are added for each end position.

- The stroke reserve length can be freely selected
- The sum of the stroke length and 2x stroke reserve must not exceed the maximum working stroke

Example:

Type:  
EGC-HD-125-500-TB-20H-...  
Working stroke = 500 mm  
2x stroke reserve = 40 mm  
  
Total stroke= 540 mm  
(540 mm = 500 mm + 2x 20 mm)

Size	125	160	220
L = safety distance with GK (per end position) [mm]	12.5	15.5	20

## Data sheet

**Working stroke reduction**

For standard slide GK/GP with additional slide KL/KR

- With a toothed belt axis with additional slide [1], the working stroke is reduced by the length of the additional slide L17 and the distance between both slides L18
- If the variant GP is ordered, the additional slide is also protected
- If the variant GK-C is ordered, the additional slide is also supplied with lubrication adapters

L16 = Slide length                      L18 = Distance between  
L17 = Additional slide length            the two slides

**Example:**

Type: EGC-HD-220-1000-TB-...-GP-KL/KR

L18 = 100 mm

Working stroke = 1000 mm – 328 mm – 100 mm = 572 mm

**Dimensions – Additional slide**

Size	125	160	220
Variant	GK	GK-C	GP
Length L17 [mm]	202	220	328

**Working stroke reduction per side**

With integrated emergency buffer NPE/shock absorber YSRW with shock absorber retainer EAYH-L2

- With a toothed belt axis, the working stroke is reduced by the total dimension of the emergency buffer/shock absorber and shock absorber retainer.

Size	125	160	220
With emergency buffer [mm]	65	93	98
With shock absorber [mm]	66	94	99

## Data sheet

### Maximum permissible support span L (without profile mounting) as a function of force F

In order to limit deflection in the case of large strokes, the axis may need to be supported.

The following graphs can be used to determine the maximum permissible support span L as a function of force F acting on the axis. The deflection is  $f = 0.5 \text{ mm}$ .

Force  $F_y$

- EGC-HD-125-TB
- ⋯ EGC-HD-160-TB
- - - EGC-HD-220-TB

Force  $F_z$

### Recommended deflection limits

Adherence to the following deflection limits is recommended so as not to impair the functionality of the axes.

Greater deformation can result in increased friction, greater wear and reduced service life.

Size	Dynamic deflection (moving load)	Static deflection (stationary load)
125 ... 220	0.05% of the axis length, max. 0.5 mm	0.1% of the axis length

## Data sheet

### Central lubrication

The lubrication adapters enable the guide of the toothed belt axis EGC-HD-TB to be permanently lubricated in applications in humid or wet ambient conditions using semi or fully automatic relubrication devices.

- For size 125, 160, 220
- The modules are suitable for oils and greases.
- The dimensions of the toothed belt axis EGC-HD-TB are the same with and without central lubrication modules.
- All lubrication connections must be connected
- There are two connection options on each side
- Can be used in combination with:
  - Standard slide GK
  - Additional slide KL, KR
- Cannot be used in combination with:
  - Standard slide, protected GP

Slide dimensions

→ page 24

Order code C in the modular product system → page 27

### Design of a central lubrication system

A central lubrication system requires various additional components. The illustration shows different options (using a hand pump, pneumatic container pump or electric container pump) required as a minimum for designing a central lubrication system. Festo does not sell these additional components; however, they can be obtained from the following companies:

- Lincoln
- Bielomatik
- SKF (Vogel)

Festo recommends these companies because they can supply all the necessary components.

- [1] Hand pump
- [2] Pneumatic container pump
- [3] Electric container pump
- [4] Manually operated container pump
- [5] Nipple block
- [6] Distributor block
- [7] Tubing or piping
- [8] Fittings

<b>Clip SMBK</b>						
	125, 160, 220	For sensor slot, for mounting the proximity switch cables	CL	534254	SMBK-8	10

1) Packaging unit

2) For mounting slot at the side

3) For mounting slot underneath

## Accessories

### Mounting options between axis and support profile

Depending on the adapter kit, the spacing between the axis and the support profile is:  
 $x = 20 \text{ mm}$  or  $50 \text{ mm}$

The support profile must be mounted using at least 2 adapter kits. For longer strokes, an adapter kit must be used every 500 mm.

Example

Ordering data					
	For size	Description	Part no.	Type	PU <sup>1)</sup>
<b>Adapter kit DHAM</b>					
	160	<ul style="list-style-type: none"> <li>For mounting the support profile on the axis</li> <li>Spacing between axis and profile is 20 mm</li> </ul>	562241	DHAM-ME-N1-CL	1
